

15-400 Project Milestone 6  
Yiyang Guo (Apr 23)

**Progress/Milestones**

I finished up the simulation and analysis since the last milestone. No major changes to the schedule, as the only thing left on the milestone is working on deliverables.

**Surprise:**

Empirical simulation experiments gave me many insights about interesting problems in probabilistic models (smoothness of objective function over parameter space, stability of non-terminating dynamics).

**Next 2 weeks:**

Finish writing up the deliverables (final report/poster, etc.)

Printing poster in advance

Potential extension to senior thesis
